--------------	----------

faq	<i>FAQ page</i>
-----	-----------------

Description

Create FAQ page

Usage

```
faq(  
  data,  
  width = NULL,  
  height = NULL,  
  elementId = NULL,  
  faqtitle = "Frequently Asked Questions",  
  expand_all_button_text = "+ Expand All",  
  collapse_all_button_text = "- Collapse All",  
  content_background_color = "white"  
)
```

Arguments

data	df with question and answer columns
width	width of this widget
height	height of this widget
elementId	element ID of this widget
faqtitle	title for this widgets
expand_all_button_text	text on expand all button
collapse_all_button_text	text on collapse all button
content_background_color	background color for answers

Examples

```
df <- data.frame(  
  question = c("Question1", "Question2", "Question3"),  
  answer = c("answer for question1",  
            "question2 answer",  
            "answer3")  
)  
faq::faq(data = df, elementId = "faq", faqtitle = "Frequently Asked Questions")
```

faq-shiny

Shiny bindings for faq

Description

Output and render functions for using faq within Shiny applications and interactive Rmd documents.

Usage

```
faqOutput(outputId, width = "100%", height = "100%")  
  
renderFaq(expr, env = parent.frame(), quoted = FALSE)
```

Arguments

<code>outputId</code>	output variable to read from
<code>width</code>	width of the widget
<code>height</code>	height of the widget
<code>expr</code>	An expression that generates a faq
<code>env</code>	The environment in which to evaluate <code>expr</code> .
<code>quoted</code>	Is <code>expr</code> a quoted expression (with <code>quote()</code>)? This is useful if you want to save an expression in a variable.
